#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### **How to Obtain More Information**

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section, Prices Division.

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Winnipeg  | (983-4020) |
|------------|------------|-----------|------------|
| Halifax    | (426-5331) | Regina    | (780-5405) |
| Montréal   | (283-5725) | Edmonton  | (495-3027) |
| Ottawa     | (951-8116) | Calgary   | (292-6717) |
| Toronto    | (973-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional reference centres.

#### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services, Division des prix.

Terre-Neuve et Labrador

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9607) ou au centre de consultation de Statistique Canada à:

| St. John's | (772-4073) | Winnipeg  | (983-4020) |
|------------|------------|-----------|------------|

## **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- r revised figures
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613)951-8200.

®Registered Trade Mark of Statistics Canada.

#### Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

## **Highlights**

#### Industrial Product Price Index (IPPI)

According to preliminary figures, the Industrial Product Price Index (IPPI, 1981 = 100) edged up 0.1% to 130.4 in January 1990, from December's revised level of 130.3. This is the first monthly increase in the last six months. The 2.0% decline shown by the primary metal products was more than offset by the estimated increase of 1.0% for petroleum and coal products and a gain of 0.8% for fruits, vegetables, feeds and other food products, as well as by the large number of smaller increases shown by most groups of finished goods.

Since January 1989, the IPPI has fallen -0.3%. The year-to-year change was affected most by lower prices for primary metal products (-17.1%) and chemical products (-5.2%). These decreases were almost completely offset by higher prices for petroleum and coal products (11.6%), machinery and equipment (3.3%) and lumber, sawmill and other wood products (2.5%). Excluding petroleum and coal products, the 12-month change was -1.3%.

As it has almost every month since the beginning of 1989, the primary metal products index declined - in January, by 2.0% - mainly in response to price decreases of 16.0% for nickel products and 3.9% for aluminum products. With a slight increase of 0.2%, the copper and copper alloy products helped moderate the overall decline. During the past 12 months, the primary metal products index has fallen 17.1%, with decreases ranging from 56.1% for nickel products to 9.7% for other non-ferrous metal products and only 0.7% for the iron and steel products. No component registered an increase.

The index for rubber, leather and plastic fabricated products slipped 0.2% in January, due mainly to a decrease of 0.7% registered by the plastic fabricated products component. This partially reflected the declines of 5.7% for foamed and expanded plastics and 1.0% for plastic bags and shipping sacks.

According to initial estimates, the petroleum and coal products price index rose 1.0% during the past month, largely as a result of higher prices for fuel oils and other fuel. Over 12 months, the petroleum and coal index has risen 11.6%.

The index for fruits, vegetables, feeds and other food products showed a rise of 0.8% in January, due mainly to increases of 2.2% for bakery products, 1.9% for sugar and 1.0% for miscellaneous food products.

The machinery and equipment price index has risen 3.3% over the past 12 months, largely due to a 4.7% increase for other specialized machinery and equipment. Marked increases posted by pulp and paper industry machinery (9.5%), sawmill and woodworking machinery (11.4%) and by mining and ore processing machinery (4.2%) were the main contributors.

#### Faits saillants

#### Indice des prix des produits industriels (IPPI)

D'après les chiffres préliminaires, l'indice des prix des produits industriels (IPPI, 1981 = 100) se situait en janvier 1990 à 130.4, en hausse de 0.1% par rapport au niveau révisé de 130.3 de décembre 1989. Ceci représente la première hausse mensuelle au cours des six derniers mois. La baisse mensuelle de 2.0% pour les produits métalliques primaires a été plus que compensée par la hausse estimée de 1.0% pour les produits du pétrole et du charbon et l'augmentation de 0.8% des fruits, légumes aliments pour animaux et aliments divers, ainsi que par le grand nombre de petites augmentations affichées par la plupart des groupes de biens finis.

Depuis janvier 1989, l'IPPI a diminué de 0.3%. La variation d'une année à l'autre a été influencée surtout par la baisse des prix des produits métalliques primaires (-17.1%) et celle des produits chimiques (-5.2%). Ces diminutions ont été partiellement compensées par les augmentations des prix des produits du pétrole et du charbon (11.6%), des machines et matériel (3.3%), des sciages, produits de scierie et divers (2.5%). Sans les produits du pétrole et du charbon, la variation sur 12 mois se serait établie à -1.3%.

Comme il l'a fait presque à chaque mois depuis le début de 1989, l'indice des produits métalliques primaires a affiché une baisse - en janvier, de 2.0% - en raison surtout des diminutions de 16.0% des produits du nickel et de 3.9% pour les produits de l'aluminium. Avec une hausse de 0.2%, l'indice des produits du cuivre et des alliages de cuivre est venu modéré la tendance à la baisse. Au cours des 12 derniers mois, l'indice des produits métalliques primaires a reculé de 17.1%, les diminutions allant de 56.1% pour les produits du nickel à 9.7% pour les autres produits de métaux non ferreux et à 0.7% pour les produits du fer et de l'acier. Aucune composante n'a affiché une augmentation.

L'indice des produits en caoutchouc, en cuir et en matière plastique a connu une diminution de 0.2% en janvier, en raison surtout de la baisse de 0.7% affichée par la composante des produits de plastique manufacturés. Ceci reflétant en partie les réductions de 5.7% pour les profils en plastique de mousse soufflée et de 1.0% pour les sacs de plastique et poches de livraison.

D'après les premières estimations, l'indice des prix des produits du pétrole et du charbon a augmenté de 1.0% au cours du dernier mois écoulé, suite surtout à la hausse affichée par les mazouts et autres carburants. Au cours des 12 derniers mois, l'indice du pétrole et du charbon a affiché un gain de 11.6%.

L'indice des prix des fruits, légumes, aliments pour animaux et produits divers a affiché une hausse de 0.8% en janvier, en raison surtout des augmentations de 2.2% pour les produits de boulangerie, de 1.9% pour le sucre et de 1.0% pour les produits alimentaires divers.

L'indice des prix des machines et du matériel a augmenté de 3.3% au cours des 12 derniers mois, en raison surtout de l'augmentation de 4.7% pour les autres machines et matériel spécialisés. De fortes hausses montrées par les machines pour l'industrie des pâtes et papier (9.5%), des scieries et machines à travailler le bois (11.4%) et par les machines d'exploitation des mines et du traitement de minerai (4.2%) ont mené le groupe.

TEXT TABLE I. Industrial Product Price Index (1981 = 100)

### Indexes and Percentage Change (1) in Indexes for Industrial Product Price Indexes Indices et variation proportionnelle (1) en indices pour les indices des prix des produits industriels 1981=100

<sup>(1)</sup> Change from same month of previous year.(1) Variation depuis le même mois que l'année précédente.

## **Highlights**

#### Raw Materials Price Index

The Raw Materials Price Index (RMPI, 1981 = 100) rose 1.2% between December 1989 and January 1990 to a preliminary level of 100.3. The RMPI excluding the mineral fuels component declined by 0.6%. Five out of seven components rose, while two declined. Between January 1989 and January 1990, the RMPI increased 3.0%. The RMPI excluding the mineral fuels component declined 6.7%.

The mineral fuels index was up 4.1% over the month, mainly as a result of an estimated 4.9% increase in crude mineral oil prices. The index was up 21.7% over the year, also largely because of higher prices for crude mineral oil, which rose 27.9%.

The vegetable products index rose 1.9% since December, as prices rose for potatoes (24.0%), citrus and tropical fruits (16.8%), and unrefined sugar (4.0%). The vegetable products index, however, was down 8.8% since January 1989, primarily as a result of lower prices for grains (-14.5%) and oilseeds (-20.2%). The index for cocoa, coffee and tea was also down over the year (-32.4%), though the index for unrefined sugar was up 35.1% and potato prices were higher by 13.3%.

Compared to last month, the animal and animal products index was down 1.4%, mainly as a result of lower prices for hogs, down 12.2%, and eggs, down 5.6%. These decreases were partially offset by higher prices for fish, up 3.7%. On an annual comparison, increases in the prices for hogs (10.6%), cattle for slaughter (3.8%), fish (8.1%) and shellfish (17.9%) were largely responsible for the 2.9% rise in the animal and animal products index. The furs, hides and skins index was down 8.5%, as fur prices dropped almost a third.

Non-ferrous metals prices were down 2.8% from December, led by lower prices for concentrates of zinc (-6.9%) and nickel (-16.5%). Precious metals were also down in the month. Indexes declined over the year for both ferrous (-10.6%) and non-ferrous (-27.1%) metals, as prices for almost all metals and scraps declined significantly.

#### Faits saillants

#### Indice des prix des matières brutes

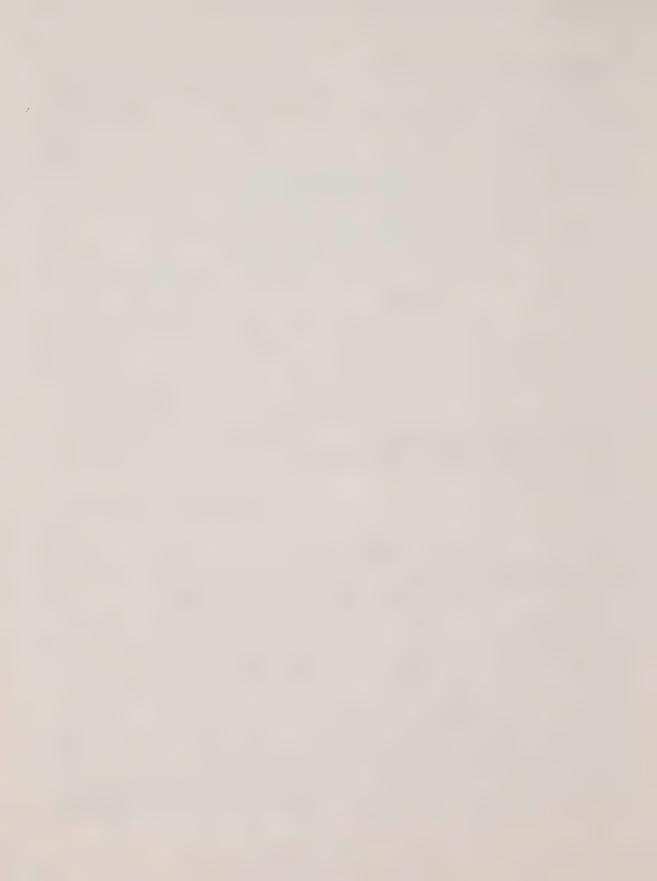

L'indice des prix des matières brutes (IPMB, 1981 = 100) a augmenté de 1.2% entre décembre 1989 et janvier 1990 pour atteindre le niveau préliminaire de 100.3. Si l'on exclut la composante des combustibles minéraux, l'IPMB a reculé de 0.6%. Des sept composantes de l'IPMB, cinq ont progressé et deux ont diminué. Entre janvier 1989 et janvier 1990, l'IPMB s'est accru de 3.0%. Si l'on exclut la composante des combustibles minéraux, l'IPMB a baissé de 6.7%.

La hausse de 4.1% de l'indice des combustibles minéraux au cours du mois est surfout attribuable à la progression estimée de 4.9% des prix du pétrole brut. De même, l'augmentation annuelle de 21.7% de l'indice s'explique en majeure partie par la hausse de 27.9% des prix du pétrole brut.

La montée de 1.9% de l'indice des substances végétales depuis décembre est attribuable à la majoration des prix des pommes de terre (24.0%), des agrumes et des fruits tropicaux (16.8%) et du sucre non raffiné (4.0%). Cet indice s'est toutefois replié de 8.8% depuis janvier 1989 en raison surtout de la baisse des prix des céréales (-14.5%) et des oléagineux (-20.2%). L'indice du cacao, du café et du thé a également diminué au cours de l'année (-32.4%) bien que les indices du sucre non raffiné et des pommes de terre aient progressé respectivement de 35.1% et de 13.3%.

L'indice des animaux et des substances animales est inférieur de 1.4% au niveau du mois dernier en raison surtout des baisses respectives de 12.2% et de 5.6% des prix du porc et des oeufs. Ces diminutions ont été partiellement neutralisées par la hausse de 3.7% des prix du poisson. La majoration des prix du porc (10.6%), des bovins d'abattage (3.8%), du poisson (8.1%) et des crustacés (17.9%) est le principal facteur de l'augmentation de 2.9% de l'indice des animaux et des substances animales. Les prix des fourrures ont baissé de presque un tiers, ce qui explique le recul de 8.5% de l'indice des fourrures, du cuir et des peaux.

Le repli de 2.8% des prix des métaux non ferreux par rapport au mois de décembre est attribuable principalement à la diminution des prix des concentrées de zinc (-6.9%) et de nickel (-16.5). Les métaux précieux ont également reculé au cours du mois. Les indices des métaux ferreux et non ferreux ont diminué respectivement de 10.6% et de 27.1% au cours de l'année en raison de la baisse considérable de presque tous les métaux et déchets de métal.

<sup>(1)</sup> 

Revised.
Révisé.
The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing industries is adjusted to match.
L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux différent occasionnellement en raison de l'arrondissement, l'indice total – tous les produits devra être considéré comme celui qui fait autorité, et l'indice total – toutes les industries manufacturières sera posé égal. (2)

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates ther a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates a special aggregation or 99, which indicates a special defails pppp indicates the PCG code (except for some special aggregations which include several PCGs).

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 3% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling. The most stable indexes are marked A, the least stable, D. For further information order industrial Product Price Indexes 1981 = 100, Concepts and Methods (Catalogue 62-556).

(1) En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où ss indique le code du niveau M des produits (de 14 à 43, 45 à 69) nn indique soit une composante du niveau M

rr indique une composante d'un GPP.

La mesure du degré de couverture pour les indices élémentaires est présentée à l'aide d'un symbole. E indique un échantillonnage exhaustif, S indique un échantillonage sommaire et P indique une estimation indirecte. Pour les indices composites, la donnée en pourcentage représente une estimation du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture par échantillonnage direct (E+S). Ces mesures du degré de couverture sont parfois arrondies au 5% le plus prés afin d'assurer la confidentialité. La mesure de la variabilité, donnée pour un certain nombre d'indices, indique la stabilité relative de l'indice en tant qu'estimation basée sur un échantillon. Les indices le plus stables sont cotés A, les moins stables, D. Pour plus de renseignements, commandez le document de référence: Indices des prix des produits industriels 1991 = 100, concepts et méthodes (nº 62-556 au catalogue).

# TABLEAU 3. Indices des prix des produits industriels, par industries et groupes d'industries(1)

Note: Indexes for the most recent six months shown are subject to revision.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The aggregation of indexes by commodities or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

(1) L'agrégation des indices par produits ou par industries devraient résulter en un même grand total. Lorsque ces totaux diffèrent occasionnellement en raison de l'arrondissement, l'indice total - tous les produits devra être considéré comme celui qui fait autorité, et l'indice total - toutes les industries manufacturières sera

l'arrondissement, l'indice total - tous les produits devra etre considere comme celui qui fait autorité, et i finite total - toutes les industrial Classification (SIC) code. An explanation of the percentage figures (coverage measure) shown to the right of the SIC can be found at the end of Table 2. These coverage measures are rounded to the nearest 5% to preserve confidentiality.

Le code numérique à la droite du numéro Databank de CANSIM apparaissant à la ligne du bas de chaque série est le code de la Classification type des industries (CTI) de 1980. Une explication des données en pourcentage (mesure de degré de couverture) apparaissant à la droite du code CTI est disponible à la fin du tableau 2. Ces mesures de degré de couverture sont arrondies au 5% le plus près afin de préserver la confidentialité.

| Indexes of net outflows of chemical products industries – Indices des sorties nettes des industries chimiques D 613819  |                   |              |                    |                |                 |                   |                |              |       |      |      |      |                     |
| Indexes of net outflows of miscellaneous manufacturing industries — Indices des sorties nettes des industries manufacturières diverses D 613820                                 |                   |              |                    |                |                 |                   |                |              |       |      |      |      |                     |

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) Net outflow indexes are calculated for the major groups described by the 1970 Standard Industrial Classification. The 1980 SIC is not used because the Input-Output tables are not yet available on the updated classification.

(1) Les indices des sorties nettes sont calculés pour les groupes principaux dérivés de la Classification des activités économiques de 1970. La classification type des industries de 1980 n'est pas utilisée en raison de l'indisponibilité des tableaux des Entrées-Sorties suivant la nouvelle classification.

## TABLE 6. Electric Power Selling Price Indexes, for Non-residential Customers

Monthly prices are collected and processed three times per annum.
Des prix mensuels sont relevés et calculés trois fois par année.
Indexes for the current year and previous year are subject to revision.
Les indices pour l'année courante et pour l'année précédente sont sujets à révision.

# EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

#### Industrial Product Price Indexes, 1981 = 100

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 1314 Principal Commodity Group (PCG) outputs as defined in the 1981 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures and a quality rating is presented for commodities and aggregations of commodities. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about five weeks after the reference month in the *Daily Bulletin* (Catalogue 11-001) following a pre-announced schedule of release dates. Simultaneously, all series are available from CANSIM or on request. Catalogue 62-011, *Industry Price Indexes*, is released about three weeks after the Daily Bulletin release. Each series is identified with a CANSIM D number and with a commodity (PCG) or industry (SIC) identifier. Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced

#### **Price Surveys**

About 10,000 prices are collected monthly from about 3,500 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure, wherein important producers are "must take" respondents and a random selection is taken from the smaller producers. Such samples are redrawn on a regular cycle as dictated by changes in

# EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRE DES PRIX INDUSTRIELS

### Indice des prix des produits industriels,

Les indices des prix des produits industriels (IPPI) mesurent les variations des prix des principaux produits vendus par les fabricants canadiens. Les indices élémentaires sont calculés pour 1314 groupes principaux des produits (GPP) tels que définis dans les tableaux d'entrées-sorties de 1981. Les poids servant à agréger les indices des produits proviennent de la matrice des sorties ou de "production" des tableaux d'entrées-sorties. Cette matrice présente un ensemble intégré de valeurs pour les produits à l'intérieur de l'ensemble des industries manufacturières.

Les produits faisant directement l'objet d'un sondage sont basés sur des procédures d'échantillonage formelles, et une cote de qualité est présentée pour les produits et les agrégats de produits. Ces indices sont calculés à partir des prix déclarés pour le 15 du mois, ou le jour ouvrable précédent le plus proche pour des transactions comparables.

Un certain nombre d'indices sont publiés environ cinq semaines après la fin du mois de référence dans le Quotidien (n° 11-001F au catalogue), selon un calendrier de publication préalablement établi. Simultanément, toutes les séries sont disponibles dans CANSIM ou sur demande. La publication n° 62-011 au catalogue, *Indice des prix de l'industrie*, paraît trois semaines environ après le communiqué dans le *Quotidien*. Chaque série est identifiée par un numéro D de CANSIM et par un identificateur de produits (GPP) ou de branche d'activité (CTI). Les chiffres publiés pour les six derniers mois sont sujets à révision. Ainsi, lorsque l'indice de juillet est publié, l'indice pour le mois de janvier précédent devient final. Les exceptions à cette règle sont signalées.

#### Enquêtes des prix

Environ 10,000 prix sont recueillis chaque mois auprès d'environ 3,500 producteurs pour des biens vendus qui sont évalués à la limite de l'établissement, de sorte que les taxes prélevées à ce point et le coût du transport fourni par les transporteurs communs au-delà de ce point sont exclus. Les prix sont relevés pour des transactions à un niveau très détaillé, qui permet d'identifier le bien et les conditions de vente. De tels relevés sont institués pour les produits importants. Des élargissements sont apportés aux échantillons pour lesquels le mouvement des prix a une dimension régionale, ou pour lesquels il existe un important marché pour l'exportation.

L'échantillonnage pour tout indice élémentaire faisant directement l'objet d'un sondage se fait habituellement par une méthode d'échantillonnage probabilistes, selon laquelle les producteurs importants sont des répondants "obligatoires", tandis que l'on procède à une sélection aléatoire des producteurs moins importants. Ces échantillons

the market. A given elemental index is usually supported by 12 to 15 price quotes, although some are derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 1314 PCGs in the manufacturing sector are accommodated by direct survey and these account for about 85% of the value of manufacturing output in 1981. The price movement for the remaining 600 PCGs is estimated indirectly from either directly priced PCGs or through borrowing price movement from other price series.

#### Weight Base

Commodity and industry weights are taken from the "Make" matrix of the 1981 Input Output table which, in turn, is derived from 1981 values reported for the Census of Manufacturers and edited to conform to the 1980 Standard Industrial Classification. Within-commodity weights can change in December of each year to reflect major changes in establishments of production patterns.

#### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where w<sup>i</sup> are the values of the output of each commodity:

sont reconstruits régulièrement, suivant l'évolution du marché. Un indice élémentaire donné repose habituellement sur 12 à 15 prix. bien que certains peuvent utiliser aussi peu que 8 prix, ou jusqu'à 30 prix.

Environ 700 des 1314 GPP du secteur de la fabrication font l'objet d'une enquête directe, qui couvrent environ 85% de la valeur de la production manufacturière en 1981. Le mouvement des prix des 600 GPP restants est estimé indirectement à partir de GPP faisant directement l'objet d'un sondage, ou en empruntant le mouvement des prix d'autres séries de prix.

#### Sources des poids

Les poids des produits et des branches d'activités proviennent de la matrice "production" du tableau d'entrées-sorties de 1981, laquelle à son tour est établie à partir des valeurs de 1981 déclarées pour le recensement des manufactures, et rectifiées afin d'être conforme à la Classification type des industries de 1980. Les poids internes des produits peuvent changer en décembre de chaque année afin d'appréhender les changements importants dans les schémas de la production.

#### Formule

Les séries en chaîne des indices de prix à pondération fixe sont calculées par une méthode de raccordement suivant laquelle les plus récentes variétés et les changements au niveau de l'univers des entreprises sont incorporés systématiquement, selon les besoins, en décembre de chaque année. Toutefois, les pondérations du niveau des produits jusqu'aux niveaux plus élevés d'agrégation sont maintenues constantes.

La formule générale servant au calcul des agrégations principales décrit les mouvements de prix d'un groupe donné de produits, dans laquelle w' sont les valeurs de la production de chaque produit:

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| (agg) |            |        |           |        |       |    |      |
|-------|------------|--------|-----------|--------|-------|----|------|
| Pt/o  | denotes    | the    | compos    | site   | price | ir | ndex |
|       | movemen    |        |           |        |       | 0  | and  |
|       | time t for | the de | fined ago | gregat | e;    |    |      |

$$P_{t/0}^{'}$$
 is the price index for element i, meaning its price change from the base period to time t;

$$\sum_{i} \qquad \text{indicates summation over all elements i in} \\ \text{the defined aggregate}.$$

$$\Sigma_i$$
 signifie la sommation de tous les éléments i dans l'agrégat défini.

#### Historical Data

Historical series on the 1981 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1980 Standard Industrial Classification (SIC) and for commodity indexes classified under the Principal Commodity Groups (PCG) classification. The historical series were obtained by linking together movements from the 1981-based Industrial Product Price Indexes (IPPI) series and the corresponding 1971-based Industry Selling Price Indexes (ISPI) series, using the year 1981 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between the IPPI and ISPI series are available to the public.

#### Reference Document

62-556 Industrial Product Price Indexes, 1981 = 100, Concepts and Methods, \$25.00.

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. The relationship of the new series to its Industry Selling Price predecessor is given. Comments on index use are also provided.

In the tables will be found weighting patterns for both commodities and commodity groupings. Descriptions of the characteristics of the elemental indexes are provided. A listing is provided of nearest equivalent series in the 1981 = 100 series as they relate to the 1971 = 100 Industry Selling Price Indexes, along with link factors derived from the relationship of the two series in December 1985

A glossary of terms is also provided.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### Données historiques

Les séries historiques sur la base 1981 pour les Indices des prix de l'industrie sont disponibles sur CANSIM. Les séries historiques sont calculées pour les indices des industries suivant la Classification type des industries (CTI) de 1980 et pour des indices des produits suivant la classification des Groupes principaux des produits (GPP). Les séries historiques furent obtenues en raccordant ensemble les mouvements des séries des indices des prix des produits industriels (IPPI) basées sur 1981 et des séries correspondantes des Indices des prix de vente dans l'industrie (IPVI) basées sur 1971, l'année 1981 ayant servi de période de raccordement. Une note explicative sur les méthodes utilisées pour calculer les séries historiques de même qu'un ensemble de tableaux montrant les concordances entre les séries IPPI et IPVI sont disponibles au public.

#### Document de référence

62-556 Indices des prix des produits industriels, 1981 = 100, Concepts et méthodes. \$25.00.

Cette publication précise le contenu économique des séries dans le cadre général du système des comptes nationaux, et son impact sur la méthodologie des indices de prix. Elle contient une description des méthodes d'échantillonnage et d'observation des prix, de même que des méthodes de calcul et d'agrégation des indices. Les relations entre la nouvelle série et l'ancienne série des prix de vente dans l'industrie qui l'avait précédée s'y trouvent également. La publication contient des commentaires sur l'utilisation des indices.

Les tableaux contiennent les schémas de pondération à la fois pour les produits et les agrégats des produits. Y figurent également une description des caractéristiques des indices élémentaires ainsi qu'une liste des séries équivalentes les plus proches de la série 1981 = 100, dans la mesure où elles se rapportent aux Indices des prix de vente dans l'industrie 1971 = 100.

La publication contient également un glossaire.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

#### RAW MATERIALS PRICE INDEXES (1981 = 100)

The Raw Materials Price Indexes measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (e.g. metal scrap). For example wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1981 time base, are published monthly in the Daily Bulletin approximately five weeks after the end of the reference month. They are also available at that time on CANSIM in matrix 1980

These indexes are, to a large extent, a continuation of the previously published Raw Materials Price Indexes. 1977 = 100. The new, 1981 = 100 indexes can be linked with their equivalents in the 1977 = 100 series using the link factors which were released in the January 1986 issue and repeated in the February and March issues of this publication. Apart from the change in time and weight base, there have been some minor changes in the structure and methodology. Thus, the previous major group Textiles has been discontinued and the commodities forming it redistributed: cotton is now a part of vegetable products and wool is a part of animal and animal products. Man-made fabrics, which did not satisfy the definition of raw materials, have been excluded from the revised index. At the same time, both the commodity samples and the samples of respondents have been revised and updated to give more reliable estimates of price movement. As a consequence some additional commodity detail is now available.

The index covers purchases of domestically produced and imported goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser.

#### INDICES DES PRIX DES MATIÈRES BRUTES (1981 = 100)

Les Indices des prix des matières brutes mesurent les variations des prix d'achat des matières brutes par les industries canadiennes. L'expression "matières brutes" désigne soit un produit vendu pour la première fois après son extraction de la nature, soit un produit substitut recyclé (tel les déchets de métaux). Ainsi, le blé est considéré comme une matière brute, mais non la farine de blé, le minerai de fer mais non la fonte en gueuses, le charbon mais non l'électricité. Les prix d'environ quatre-vingt produits, regroupés en sept composantes principales, sont recueillis aux fins de l'indice.

L'indice d'ensemble et les indices des composantes principales, ayant comme période de référence 1981, sont publiés mensuellement dans le Quotidien de Statistique Canada, environ cinq semaines après la fin du mois de référence. Ces indices sont également disponibles dans la matrice 1980 de CANSIM.

Ces indices constituent, dans une large mesure, la suite des Indices des prix des matières brutes. 1977 = 100. précédemment publiés. Les nouvelles séries basées 1981 = 100 peuvent être raccordées à leurs séries équivalentes basées 1977 = 100 en utilisant les facteurs de raccordement. Ces derniers sont publiés dans le numéro de ianvier 1986, et répétés dans les numéros de février et de mars 1986, de la présente publication. Outre le changement dans la période de pondération et de référence, de légères modifications ont été apportées à la structure et à la méthodologie. Ainsi, l'ancienne composante principale nommée Matières textiles a été dissoute, et les produits qui en faisaient partie ont été reclassifiés comme suit: le coton se retrouve maintenant avec les substances végétales, et la laine, avec les animaux et substances animales. Ne satisfaisant pas à la définition de matières brutes, les fibres synthétiques ont été exclues du nouvel indice. Par ailleurs, les échantillons à la fois des produits et des répondants ont été révisés et mis à jour afin d'obtenir des estimations plus fiables des mouvements de prix. En conséquence, plus de détails sont maintenant disponibles pour certains produits.

L'indice couvre les achats par les industries canadiennes de biens produits au Canada et de biens importés, en vue d'une transformation subséquente. L'indice ne couvre cependant pas les exportations, ni les matières brutes qui se rendent directement à la demande finale (principalement les denrées alimentaires). Par exemple, les pommes de terre achetées par les fabricants de produits alimentaires (pour la production de croustilles ou de pommes de terre congelées) sont pris en compte dans l'indice, alors que celles directement achetées par les consommateurs ne le sont pas.

Comme il s'agit d'un indice des prix d'achat, les prix devraient comprendre tous les frais supportés par l'acheteur pour faire parvenir le produit à la porte de l'établissement. Les frais de transport, les taxes et les droits de douane, de même que les effets de toute subvention versée à l'acheteur, sont donc incorporés aux prix.

While prices are ideally collected from the purchaser. there are several cases where other well known prices are used instead; for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occured for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

Weights were derived from the 1981 Input/Output tables which provide values at purchasers prices of commodities purchased as intermediate inputs. These weights are shown in the accompanying table.

Indexes for aggregates of individual raw materials are calculated according to the following formula:

(agg)

Bien au'idéalement, les prix sont directement recueillis auprès des acheteurs, il existe en pratique un certain nombre de cas où des prix provenant d'autres sources bien connues sont utilisés: par exemple, les prix des offices de commercialisation des oeufs et du lait, les prix des parcs à bestiaux. Dans un certain nombre de cas où les données pour les matières non transformées ne sont pas disponibles, les prix sont prélevés pour un produit semblable à l'étape suivante de transformation. Tel est le cas notamment pour certains métaux non ferreux. La Division des prix fera parvenir sur demande une description détaillée des caractéristiques des prix d'un produit donné.

Les prix recueillis chaque mois sont ceux en vigueur le 15 du mois ou le jour ouvrable qui le précède immédiatement. Dans certains cas, les prix relevés représentent la movenne des prix de la semaine englobant le 15 du mois. Les prix sont soit déclarés directement à Statistique Canada, soit tirés de revues spécialisées ou de publications d'autres organismes gouvernementaux.

pondérations furent dérivées des tableaux d'entrées-sorties de 1981, qui fournissent les valeurs aux prix d'achat des produits acquis à titre d'entrées intermédiaires. Ces pondérations sont présentées au tableau ci-joint.

Les indices pour les agrégats de matières brutes individuelles sont dégagés à l'aide de la formule suivante:

indique la sommation sur tous les éléments i faisant

$$P_{t/o}^{(agg)} = \sum_{i} \frac{w^{i}}{\sum_{w^{i}}} \cdot P_{t/o}^{i}$$

| Pt/o | denotes the composite price index movement between the base period o and time t for the defined aggregate; | P <sub>t/o</sub> | dénote le mouvement de l'indice composite de prix<br>entre la période de référence o et la période courante<br>t pour l'agrégat spécifié; |
|------|--|------------------|---|
| Wİ   | is the transaction value of the element i in 1981;   | wi               | est la valeur de transaction de l'élément i en 1981;  |
| Pt/o | is the price index for element i, meaning its price change from the base period to time t;                 | Pt/o             | est l'indice de prix de l'élément i, c'est-à-dire sor<br>changement de prix de la période de référence o à a                              |

 $\sum_{i}$ 

(agg)

indicates summation over all elements i in the defined aggregate.

Within individual commodity indexes, the prices are weighted according to their market share in 1981 or a more recent year. In a few instances, where data are not available, the price quotations are equally weighted.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

L'intérieur des indices individuels des produits, les prix sont pondérés selon leurs parts du marché en 1981 ou pour une année plus récente. Dans quelques cas où les données ne sont pas disponibles, les cotes de prix ont des pondérations équivalentes.

période courante t:

partie de l'agrégat spécifié.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# ELECTRIC POWER SELLING PRICE INDEXES (NON-RESIDENTIAL), 1981 = 100

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 KW and for sales of 5000 KW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1981 as a time reference base and the weights used are 1981 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described for the Industrial Product Price Indexes, 1981 = 100, technical notes presented above. The indexes are available on CANSIM in matrix 1979. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6 or telephone (613)951-9607.

#### INDICES DES PRIX DE VENTE DE L'ÉNERGIE ÉLECTRIQUE (NON RÉSIDENTIELLE), 1981 = 100

Les indices des prix de vente de l'énergie électrique sont publiés, par région et par province, pour deux grandes catégories de clients industriels, soit les factures de moins de 5000 kW et les factures de 5000 kW et plus. Les prix sont déclarés par les services publics d'électricité pour des contrats d'énergie non susceptible d'être interrompue, conclus avec des manufacturiers, des services et d'autres clients industriels canadiens. Les prix mensuels sont relevés trois fois par année auprès de tous les grands services de production et de distribution d'énergie. Les indices établis, accompagnant d'autres indices mensuels des prix de l'industrie, sont diffusés chaque année aux mois d'avril, d'août et de décembre. Les indices ont comme période de reférence 1981, et les pondérations sont fondées sur les recettes au titre des ventes qu'ont touchées les entreprises en 1981, telles que recueillies par la Division des prix.

Le calcul des indices des prix de vente de l'énergie électrique se fait à l'aide d'une formule d'indice à pondération fixe, identique à celle décrite ci-dessus dans les notes techniques des Indices des prix des produits industriels, 1981 = 100. Les indices sont disponibles par l'entremise de CANSIM sur la matrice 1979. Les indices de la présente année et de l'année précédente sont sujets à révision.

Pour plus de renseignements, veuillez contacter la Division des prix, Statistique Canada, Ottawa, Ontario K1A 0T6, ou téléphonez au (613)951-9607.

# How long would it take you to get 10,000 price quotes from 3,500 companies?

A lot longer than it takes to open a copy of **Industry Price Indexes**. Subscribe now, for the most extensive data available on Canadian manufacturing selling prices.

Industry Price Indexes are indispensable if you need current, consistent and reliable reports on price fluctuations at the Canadian factory gate. Uses include preparing escalation contracts, inventory management, charting trends, forecasting price changes or compiling data to create your own index.

This monthly publication covers raw materials, energy and over 700 commodities by 20 major groups. Items listed range from fish fillets to industrial furnaces, cattle to crude oil. Most commodities are reported at the national level, but some are given on a regional basis.

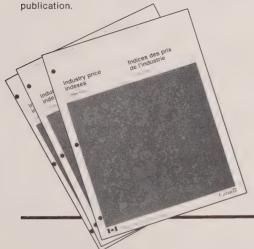

Each issue also provides a historical perspective, with tables of annual averages and monthly price indexes of commodities for the past five years.

As the only periodical of this scope and detail, **Industry Price Indexes** is the recognized authority on changes in the selling prices of Canadian manufactured goods.

Get the facts.

A subscription to the monthly **Industry Price Indexes** (Catalogue No. 62-011) is \$173 in Canada, and \$208 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this

### Combien de temps vous faudrait-il pour obtenir 10 000 propositions de prix de 3 500 compagnies?

eaucoup plus de temps qu'il n'en faut pour lire un exemplaire d'Indices des prix de l'industrie. Abonnezvous dès maintenant afin d'avoir accès aux données les plus complètes possible sur les prix de vente des manufacturiers canadiens.

Indices des prix de l'industrie est indispensable si vous avez besoin de rapports à jour, uniformes et flables au sujet des fluctuations des prix à la production au Canada. Ces indices peuvent servir notamment à préparer des contrats d'indexation, à gérer des stocks, à suivre des tendances au moyen de graphiques, à prévoir des fluctuations de prix ou à compiler des données pour concevoir votre propre indice.

Cette publication mensuelle porte sur les matières premières, l'énergie et plus de 700 produits classés dans 20 grandes catégories. Les articles répertoriés vont des filets de poisson aux fours industriels en passant par les bovins et le pétrole brut. Pour la plupart des produits, les statistiques ont une portée nationale; toutefois, pour certains, elles revêtent un caractère régional.

Chaque numéro donne également une perspective historique; des tableaux indiquent les moyennes annuelles et les indices des prix mensuels des produits au cours des cing dernières années.

Indices des prix de l'industrie est le seul périodique aussi complet et détaillé. Il fait autorité en ce qui touche les fluctuations des prix de vente des marchandises fabriquées au Canada.

Abonnez-vous!

L'abonnement au mensuel **Indices des prix de l'industrie** (n° 62-011 au catalogue) coûte 173 \$ au Canada et 208 \$ à l'étranger.

Pour commander, veuillez écrire à Vente des publications, Statistique Canada, Ottawa (Ontario) K1A 0T6 ou communiquer avec le Centre de consultation de Statistique Canada le plus près (voir la liste figurant dans la présente publication).

# What happened to the cost of living last month?

The Consumer Price Index will tell you.

Whether you negotiate wage settlements, administer COLA clauses in labour contracts, assess government policies or are involved in renewal contracts, child support or alimony payments, you need current and detailed information on changes in the cost of living.

Compiled monthly (and published within 20 days of the month's end), the **Consumer Price Index** gives you a precise account of the latest fluctuations in consumer prices.

This monthly publication covers:

- transportation
- health and personal care
- food
- · recreation, reading and education
- clothing
   housing
   tobacco products and alcoholic beverages

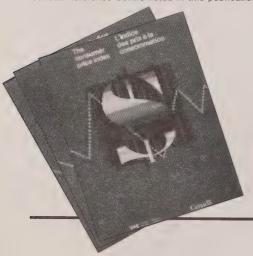

Over 400 items, ranging from milk to parking, household furnishings to reading material, are included.

Price indexes are presented nationally and for 18 major Canadian cities. In each issue you receive month-to-month percentage comparisons and trends over the last five years. And each issue analyzes the main causes of changes.

Get the facts.

Subscribe to the Consumer Price Index (Catalogue No. 62-001) for the authoritative measure of the purchasing power of the Canadian consumer dollar. A subscription to this monthly is available for \$89 in Canada, and \$107 outside Canada.

To order, write Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6, or contact the nearest Statistics Canada Reference Centre listed in this publication.

# Qu'en était-il du coût de la vie le mois dernier?

L'indice des prix à la consommation répond à votre question.

Que vous ayez à négocier des règlements salariaux, à administrer des clauses d'indemnité de vie chère ou à évaluer des politiques gouvernementales, que vous vous occupiez du renouvellement de contrats, de pensions alimentaires ou d'allocations d'entretien, vous avez besoin de données récentes et détaillées sur les fluctuations du coût de la vie.

Établi mensuellement, et publié dans les 20 jours suivant la fin de chaque mois, L'indice des prix à la consommation vous renseigne de façon précise sur les plus récentes fluctuations des prix à la consommation.

Cette publication mensuelle porte sur :

- l'alimentation
- l'habillement
- l'habitation
- le transport
- la santé et les soins personnels
  les loisirs, la lecture et la formation
- · les produits du tabac et les boissons alcoolisées

Plus de 400 articles sont inclus, allant du lait au stationnement en passant par l'ameublement de maison et le matériel de lecture.

Les indices de prix sont donnés pour l'ensemble du pays et 18 principales villes canadiennes. Chaque numéro présente des comparaisons des pourcentages mois après mois et les tendances au cours des cinq dernières années. En outre, chaque numéro analyse les principales causes de changements.

Abonnez-vous!

L'indice des prix à la consommation (n° 62-001 au catalogue) vous permet d'obtenir une évaluation fiable du pouvoir d'achat du dollar canadien. L'abonnement à cette publication mensuelle coûte 89 \$ au Canada et 107 \$ à l'étranger.

Statistics Canada Statistique Canada Canadä

#### Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

#### How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Goods and Services Producing Industries Section, Prices Division.

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9607) or to the Statistics Canada reference centre in:

| St. John's | (772-4073) | Winnipeg  | (983-4020) |

#### Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

#### Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des industries de biens et de services, Division des prix.

#### **Symbols**

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- -- amount too small to be expressed.
- p preliminary figures.
- revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

#### NOTE

CANSIM® (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0T6 or call (613)951-8200.

®Registered Trade Mark of Statistics Canada.

#### Revisions

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

#### Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombres non disponibles.
- ... n'avant pas lieu de figurer.
- néant ou zéro.
- -- nombres infimes.
- p nombres provisoires.
- ' nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

#### NOTA

Le CANSIM® (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0T6, ou téléphonez à (613)951-8200.

<sup>®</sup>Marque déposée de Statistique Canada.

#### Révisions

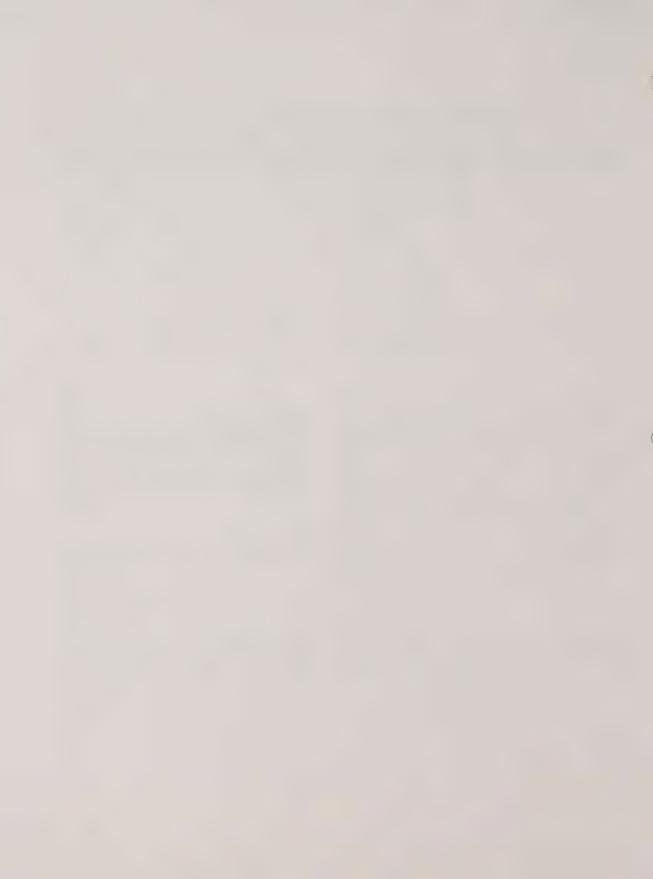

Sauf avis contraire, les indices de prix contenus dans la présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Toute révision portant sur une plus longue période est indiquée.

This publication was prepared under the direction of:

- Barbara J. Slater, Director, Prices Division
- Robin Lowe, Chief, Goods & Services Producing Section

#### **Highlights**

#### Industrial Product Price Index (IPPI)

According to oreliminary figures, the Industrial Product Price Index (IPPI, 1981 = 100) moved up 0.7% to 131.3 in February 1990, from January's level of 130.4. This is the second consecutive monthly increase of the index as a whole. Only two groups of products showed a decrease this month, of 0.3% for primary metal products and 0.4% for meat, fish and dairy products. These were more than offset by the estimated increase of 2.5% for petroleum and coal products and the impact of the increased value of the American dollar on a number of product groups. A majority of the increases registered this month were the result of the temporary 3.8% increase, in February, of the U.S. dollar versus its Canadian counterpart and its impact on prices of exported goods and products: mainly affected were autos, trucks and other transportation equipment (2.0%), paper and paper products (1.8%) and lumber, sawmill and other wood products (1.1%).

Since February 1989, the IPPI has risen 0.4%. The year-to-year change was affected most by higher prices for petroleum and coal products (13.3%), machinery and equipment (3.3%), autos, trucks and other transport equipment (2.7%) and lumber, sawmill and other wood products (3.3%). These increases were almost completely offset by lower prices for primary metal products (-16.9%) and chemical products (-5.0%). Excluding petroleum and coal products, the 12-month change was -0.6%.

According to initial estimates, the petroleum and coal products price index rose 2.5% during the past month, largely as a result of higher prices for gasoline and fuel oil. Over 12 months, the petroleum and coal index has risen 13.3%.

As it has almost every month since the beginning of 1989, the primary metal products index declined, in February (-0.3%), mainly in response to price decreases of 9.1% for nickel products and 1.4% for aluminum products. With an increase of 3.3%, the copper and copper alloy products helped moderate the overall decline. During the past 12 months, the primary metal products index has fallen 16.9%, with decreases ranging from 63.7% for nickel products to 9.0% for other non-ferrous metal products, but only 1.3% for the iron and steel products. No component registered an increase.

The index for meat, fish and dairy products edged down 0.4% in February, due to a decrease of 0.9% registered by the primary meat products component. This mainly reflected price reductions for fresh or frozen varieties, of 6.9% for turkeys, of 1.7% for chickens and 1.1% for beef and veal.

The machinery and equipment price index has risen 3.3% over the past 12 months, largely due to a 4.4% increase for other specialized machinery and equipment. Marked increases posted by pulp and paper industry machinery (9.8%), sawmill and woodworking machinery (6.8%) and by food preparation machinery (9.5%) were the main contributors.

#### Faits saillants

#### Indice des prix des produits industriels (IPPI)

D'après les chiffres préliminaires, l'indice des prix des produits industriels (IPPI, 1981 = 100) se situait en février 1990 à 131.3, en hausse de 0.7% par rapport au niveau de 130.4 de janvier 1990. Ceci représente la deuxième hausse consécutive de l'indice total. Deux seuls groupes ont affiché une baisse, de 0.3% pour les produits métalliques primaires et de 0.4% pour la viande, poisson et produits laitiers. Celles-ci ont plus qu'été compensées par la hausse estimée de 2.5% pour les produits du pétrole et du charbon et par l'impact de la hausse du dollar américain sur un certain nombre de groupes de produits. La plupart des hausses affichées ce mois-ci sont dues principalement au gain temporaire de 3.8% du dollar américain face au dollar canadien en février et son impact sur les prix à l'exportation; les groupes principalement affectés ont été les voitures, camions et autre matériel de transport (2.0%), le papier et les produits connexes (1.8%), les sciages et produits de scierie (1.1%).

Depuis février 1989, l'IPPI a augmenté de 0.4%. La variation d'une année à l'autre a été influencée surtout par les augmentations des prix des produits du pétrole et du charbon (13.3%), des machines et matériel (3.3%), des autos, camions et autre matériel de transport (2.7%) et des sciages, produits de scierie et divers (3.3%). Ces augmentations ont été partiellement compensées par la baisse des prix des produits métalliques primaires (-16.9%) et celle des produits chimiques (-5.0%). Sans les produits du pétrole et du charbon, la variation sur 12 mois se serait établie à -0.6%.

D'après les premières estimations, l'indice des prix des produits du pétrole et du charbon a augmenté de 2.5% au cours du dernier mois écoulé, suite surtout à la hausse affichée par l'essence et le mazout. Au cours des 12 derniers mois, l'indice du pétrole et du charbon a affiché un gain de 13.3%.

L'indice des produits métalliques primaires a affiché une baisse (-0.3%) comme il l'a fait presque à chaque mois depuis le début de 1989, en raison surtout des diminutions de 9.1% des produits du nickel et de 1.4% pour les produits de l'aluminium. Avec une hausse de 3.3%, l'indice des produits du cuivre et des alliages de cuivre est venu modéré la tendance à la baisse. Au cours des 12 derniers mois, l'indice des produits métalliques primaires a reculé de 16.9%, les diminutions allant de 63.7% pour les produits du nickel à 9.0% pour les autres produits de métaux non ferreux et à 1.3% pour les produits de fer et de l'acier. Aucune composante n'a affiché une augmentation.

L'indice de la viande, du poisson et des produits laitiers a glissé de 0.4% en février, en raison surtout de la baisse de 0.9% affichée par la composante des produits primaires de la viande. Ceci reflétant en partie les réductions, pour produits frais ou congelés, de 6.9% pour les dindons, de 1.7% pour les poulets et de 1.1% pour le boeuf et veau.

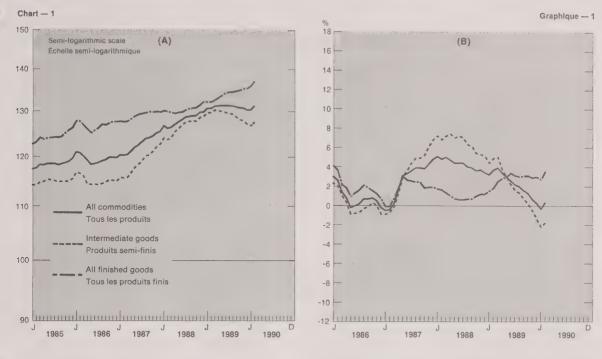

L'indice des prix des machines et du matériel a augmenté de 3.3% au cours des 12 derniers mois, en raison surtout de l'augmentation de 4.4% pour les autres machines et matériel spécialisés. De fortes hausses montées par les machines pour l'industrie des pâtes et papier (9.8%), des scieries et machines à travailler le bois (6.8%) et par les machines à préparer les aliments (9.5%) ont mené le groupe.

# Indexes and Percentage Change (1) in Indexes for Industrial Product Price Indexes Indices et variation proportionnelle (1) en indices pour les indices des prix des produits industriels 1981=100

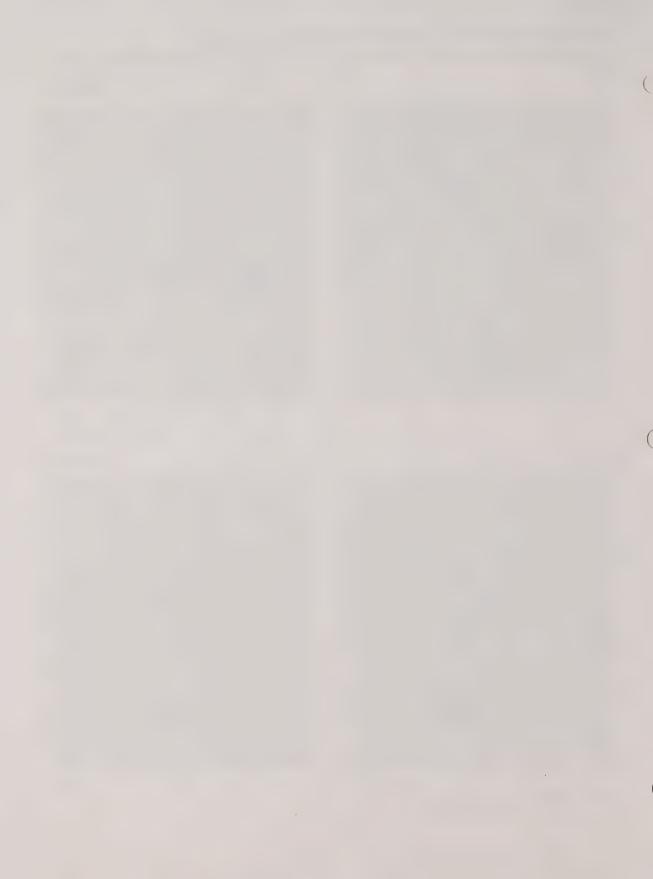

(1) Change from same month of previous year.

(1) Variation depuis le même mois que l'année précédente.

#### **Highlights**

#### Raw Materials Price Index

The Raw Materials Price Index (RMPI, 1981 = 100) rose 3.4% between January and February 1990, to a preliminary level of 103.6. The index excluding the Mineral fuels component rose 1.6%, the first monthly increase since last August. All seven components of the RMPI rose in February.

The RMPI was 5.3% higher in February 1990 than in February 1989. This is due to the increase in oil prices. The index excluding mineral fuels was 4.6% below its level of a year ago. Apart from mineral fuels, only the animal and animal products and wood indexes were higher than a year ago.

The mineral fuels index continued rising in February, by 6.0%, due to an estimated increase in crude oil prices of 7.3%. Since a year ago, the mineral fuels index has risen 23.7%. This is almost entirely due to the 29.9% increase in crude oil prices, as natural gas and thermal coal prices are only up by about 1%

The animal and animal products index rose 1.9%, as hog prices, which had fallen in January, recovered by 12.5%. Hog prices stood 21.8% higher in February 1990 than twelve months previously; this, together with fresh fish prices which were 9.3% higher, caused the animal and animal products index to be 3.3% higher than a year ago.

The vegetable products index rose 2.5% in February, its second monthly increase after falling through most of 1989. As in January, the main contributors were sugar, up 6.5%, citrus and tropical fruits, up 21.8%, and potatoes, up 4.2%. Despite recent increases, the vegetable products index was still 5.3% below its level in February 1989. Though fruit, vegetable and sugar prices were significantly higher than a year ago, these increases were more than offset by lower prices for grains, down 12.2%, and for oilseeds, which, led by soybeans (down 24.6%), were 15.1% lower than a year ago.

The non-ferrous metals index was up 1.9%, its first increase since last October, as increases in copper (up 5.3%) and lead (up 5.8%) prices outweighed continued declines in other base metal prices. Prices for precious metals, which have been rising since the fall, were up 4.8% in February. The non-ferrous metals index was 21.3% below its level of February 1989, due to lower price levels for virtually all base metals; on the other hand, precious metal prices were 8.2% higher than a year previous.

#### Faits saillants

#### Indice des prix des matières brutes

L'indice des prix des matières brutes (IPMB, 1981 = 100) a augmenté de 3.4% de janvier à février 1990 pour atteindre le niveau préliminaire de 103.6. Sans la composante des combustibles minéraux, l'indice a progressé de 1.6%, pour la première fois depuis le mois d'août. Les sept composantes de l'IPMB se sont accrues en février.

En février 1990, l'IPMB a augmenté de 5.3% par rapport à février 1989. Cet accroissement est attribuable à la majoration du prix du pétrole. Sans la composante des combustibles minéraux, l'IPMB a régressé de 4.6% par rapport au niveau atteint l'année précédente. Exception faite des combustibles minéraux, seuls les indices pour les animaux et substances animales et le bois ont affiché des niveaux plus élevés qu'il y a un an.

L'indice des combustibles minéraux a poursuivi son ascension (6.0%) en février en raison de la hausse estimée de 7.3% du prix du pétrole brut. Au cours des 12 derniers mois, l'indice des combustibles minéraux a augmenté de 23.7% à cause de la progression de 29.9% du prix du pétrole brut, alors que les prix du gaz naturel et du charbon ne sont supérieurs que de 1% à leurs niveaux de l'année précédente.

En février, l'indice des animaux et substances animales a monté de 1.9% à la faveur du redressement de 12.5% du prix du porc, qui avait reculé en janvier. Le prix du porc se situait 21.8% plus haut en février 1990 qu'il ne l'était il y a un an. Ceci, conjugué avec la hausse de 9.3% pour le poisson frais a eu pour effet de pousser l'indice des prix des animaux et substances animales à un niveau 3.3% plus élevé qu'il y a 12 mois.

L'indice des substances végétales a enregistré une hausse de 2.5% en février, sa deuxième après avoir chuté durant presque toute l'année 1989. Comme en janvier, les principaux facteurs du relèvement ont été le sucre (6.5%), les agrumes et les fruits tropicaux (21.8%), et les pommes de terre (4.2%). En dépit d'augmentations récentes, l'indice des substances végétales était encore inférieur de 5.3% à son niveau de février 1989. Les hausses considérables des prix des fruits, des légumes et du sucre par rapport à l'année dernière, ont été plus que neutralisées par les diminutions des prix des céréales (12.2%) et des graines oléagineuses (15.1%), ce dernière recul s'expliquant en majeure partie par la baisse de 24.6% du soja.

L'indice des métaux non ferreux a augmenté de 1.9% en février, pour la première fois depuis octobre dernier, alors que les progressions du cuivre (5.3%) et du plomb (5.8%) ont neutralisé les baisses de prix encore enregistrées pour les autres métaux de base. En février, les prix des métaux précieux, qui sont à la hausse depuis l'automne, ont monté de 4.8%. L'indice des métaux non ferreux a diminué de 21.3% par rapport à son niveau de février 1989 à cause du recul des prix de presque tous les métaux de base; par ailleurs, les prix des métaux précieux ont progressé de 8.2% depuis 12 mois.

This shows the amount by which the movement of each index would move the total in the absence of any change in the other indexes. Ce childre donne l'ampleur de la variation qu'occasionnerait dans l'indice d'ensemble un mouvement d'un indice donné si tous les autres indices demeuraient inchangés.

These indexes are preliminary.

Note: Indexes for the most recent six months shown are subject to revision.

Nota: Les indices figurant pour les six mois les plus récents sont sujets à révision.

(1) The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM Databank code number (d nnnnnn), a numeric descriptor, a coverage measure, and a variability measure. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates ther a split of the M-level commodity, or 91, which indicates a special aggregation or 99, which indicates a special aggregation or 99, which indicates the PCG code (except for some special aggregations which include several PCGs). rr indicates a split of a PCG.

The coverage measure for an elemental index is a symbol: E indicates a fully designed sample, S indicates an abbreviated sample, P indicates an indirect estimate. For a composite index the percentage of the coverage which is estimated from direct surveys (E+S) is given, occasionally these coverage measures are rounded to the nearest 5% to preserve confidentiality. The variability measure is given for some indexes to indicate the relative stability of the index estimate due to sampling The most stable indexes are marked A, the least stable, D. For further information order Industrial Product Price indexes 1981 = 100. Concepts and Methods (Gatalogue 62-556).

En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de

(Catalogue 62-556).
En lisant de gauche à droite, la ligne en-dessous de chaque titre des séries présente, en tout ou en partie, l'information suivante: le numéro de code "Databank" de CANSIM (D nnnnn), un numéro d'identification numérique, une mesure du degré de couverture et une mesure de la variabilité. Le numéro d'identification numérique prend la forme générale ss-mm-nn-pppp-rr où: ss indique le code du niveau S des produits (de 9 à 28) mm indique le code du niveau M des produits (de 14 à 43, 45 à 69) nn indique soit une composante du niveau M des produits, ou prend la valeur de 91 pour les agrégats spéciaux, ou de 99 pour les indices particuliers. pppp indique le code GPP (sauf pour certains agrégats spéciaux qui comprenent plusieurs GPP) rr indique une composante d'un GPP.

rr indique une composante d'un GPP.

rr indique une composante d'un GPP.
